FACILITIES

There are 10 flight cages and 6 large cages. All cages have a built-in vacuum system connected which allows removal of seed and food waste. Each structure has wind protection from Northerly winds and partial roofing to allow birds to remain dry in inclement weather as they choose.

There is a dedicated food service and preparation facility for food storage and includes two water distillers providing 15 gallons daily as well as two dishwashers for daily sterilization of all food and water dishes.
